VEGA

VEGABAR 50/60

Revision	Description	Available since
1.21	First sales version VEGABAR.	11/2002
1.22	Adaption to the power mangement for WIKA - DMU.	01/2003
2.03	New functions: - Profibus-PA communication - PLICSCOM languages french and spanish - PLICSCOM function "PIN" - PLICSCOM function "Copy sensor data"	06/2003
3.03	New functions: - FF communication - PLICSCOM language russian - Device trend recording	10/2003
3.07	Error correction FF communication.	10/2003
3.22	New function: - PLICSCOM language italian Error correction FF communication.	07/2004
3.32	Common: - linearization possible with sensors according to WHG - error correction PLICSCOM: - additional language Chinese and Japanese - PLICSCOM with back light - adjustment of maximum current possible - SIL setting possible HART sensors: - failture mode according to SIL allows 22mA and <3.6mA (reset value <3.6mA) FF sensors: - change in "block execution time" - error correction - introduction device rev. 3	04/2006
3.50	PLICSCOM: - additional language Dutch - error correction PA Sensors: - error correction	02/2007
3.70	Function enhancement for climatic compensated absolute pressure transmitter	05/2008

VEGABAR 50/60

Revision	Description	Available since
3.80	Common: - SIL certification as order option PLICSCOM: - error correction FF sensors: - fixed function blocks. No more dynamic instances - device revision 4 (requires new DD- and CFF-file in the DCS system) - error correction	10/2008
3.81	Add-on HART communication for EDD	03/2010
3.82	error correction HART communication for EDD	09/2010
3.90	Support for software update for current electronic index or higher	05/2014
